REQUIREMENT HTA/SI/R78/56: Describe new buildings associated with the Leningrad Institute of Aviation Instruments. Also describe security measures, antennas on roofs or vehicles, and railroad sidings.

REMARKS:

The Institute of Aviation Instruments, located in the southern part of Leningrad, is engaged in research and training in the field of aircraft instruments, including radio, radar, and other electronic equipment. It occupies a three-story Y-shaped building and five small single-story buildings.

25X1D  photography shows no significant change in the Institute since previous photographic coverage  except that damage incurred during the war has been repaired. It has no rail service and there is no evidence of security measures. Small scale of the photography precludes identification of antennas on roofs or vehicles.

25X1D

Several new buildings are under construction immediately to the west, and to the northeast of the Institute. However, they appear to be apartment houses and to have no relation to the Institute.
